

Maintenance

Loss Prevention Solution products can be cleaned by wiping the surface with a cloth dampened in mineral spirits (should be sufficient to remove grease and other undesired marking on the surface). It is recommended to annually check the tightness of all door hardware, screws and bolts. It is recommended to annually lubricate door lock and exit devices with a light oil.

Any dents and/or bends in the body of the wire mesh framing too extensive to be reshaped on-site by maintenance personnel must be replaced.

Please call 844-850-6700 with any questions or concerns.
